

Project: Todo Business Requirements	Test Case Template
Course: CSD 380 DevOps	
Description: Todo is a business application focused on the monitoring of task items. Users of this system are able to create, update, and delete items from their “Todo List.” Views have been created to support most major devices and web browsers.	
Date: 2026/06/25	

To complete the test case plan, fill out the information for Project, Course, Description and Date in the header below.

TABLE OF CONTENTS

Create and View Todo Task Item.....	2
Edit Todo Task Item.....	3
Delete Todo Task, Error Page, and Responsive Views.....	3
Invalid URL and Custom 404 Error Page.....	4
Responsive Mobile and Tablet Views.....	5

Test Case Template

For each test, the developer should: provide a test description, a test objective, the developer name and date tested. For each step, fill out the actions to be taken and describe the expected results, and indicate yes or no for each step

Test 1	Create and View Todo Task Item			
	Test Objective: Verifies that users can visit the website, create todo task items, view the Todo List, and are prevented from submitting a blank task form.	Developer: Date tested: 2026/06/25	Peer tester: Date tested: <6/28/2026>	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail + Screenshot
1	Open the Todo application at https://buwebdev.github.io/todo/ .	The landing page loads successfully and shows the Task Form, todo input field, Add Task button, and Todo List section.	Yes	<yes>
2	Enter the task item "Attend 2PM meeting" into the task form and select Add Task.	The todo item is added to the Todo List and displays as "Attend 2PM meeting."	Yes	<yes>
3	Enter a second task item, "Schedule meeting with Jim," and select Add Task.	The new item is added without removing the first item, and the Todo List displays both tasks.	Yes	<yes>
4	Review the Todo List after adding items.	The list is readable, organized, and displays the created task items for the user.	Yes	<yes>
5	Leave the task form blank and select Add Task.	The application prevents submission without a todo item and does not add a blank task to the list.	Yes	<yes>
Comments	Working as expected.			

depending upon the result. The peer tester should provide their name, date tested, indicate yes or no for each step depending upon the result, and a screenshot (thumbnail) of the result.

Test 2	Edit Todo Task Item
--------	----------------------------

Test Case Template

	Test Objective: Verifies that users can update an existing todo task item and that the edit form prevents blank submissions.	Developer: Date tested: 2026/06/25	Peer tester: Date tested: <6/28/2026>	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Create or locate an existing todo item named "Attend 2PM meeting."	The selected todo item is visible in the Todo List and can be opened for editing.	Yes	<yes>
2	Open the edit option or edit view for the selected todo item.	The Edit Form opens and displays the current task text in the input field.	Yes	<yes>
3	Change the task text to "Attend 3PM meeting" and select Save.	The application saves the change and returns the user to the updated Todo List.	Yes	<yes>
4	Verify the updated task item in the Todo List.	The list displays "Attend 3PM meeting" and no longer displays the old "Attend 2PM meeting" text for that item.	Yes	<yes>
5	Open the edit form again, clear the input field, and select Save.	The application prevents saving an empty todo item and keeps the user from creating a blank task value.	Yes	<FAIL>
Comments	There is a bug that allows the user to save an empty item, need to be fixed			

Test 3	Delete Todo Task, Error Page, and Responsive Views			
	Test Objective: Verifies that users can delete task items, receive a custom 404 page for invalid URLs, and use the application on mobile and tablet views.	Developer: Date tested: 2026/06/25	Peer tester: Date tested: <6/28/2026>	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Create or locate a todo item named "Onboard new sales team members."	The item is visible in the Todo List and is available for deletion testing.	Yes	<yes>
2	Use the delete control or delete action for the selected todo item.	The selected todo item is removed from the Todo List.	Yes	<yes>

Test Case Template

3	Refresh or revisit the Todo List view.	The deleted item does not reappear in the current Todo List view.	Yes	<yes>
4	Navigate to an invalid page such as https://buwebdev.github.io/todo/not-a-real-page .	The application displays a custom 404 error page instead of a generic or broken browser error.	Yes	<yes>
5	View the Todo application using mobile-width and tablet-width browser sizes.	The application remains usable and readable on mobile and tablet views, including the task form, Add Task button, edit view, and Todo List.	Yes	<yes>
Comments	On test 3, the page didn't save all of the changes I made, everything was lost, and needs to be fixed			

Test 4	Invalid URL and Custom 404 Error Page			
	Test Objective: Verifies that invalid application URLs show a custom 404 error page instead of a generic browser or server error.	Developer: Date tested: 2026/06/25	Peer tester: Date tested: <6/28/2026>	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Open the Todo application homepage at https://buwebdev.github.io/todo/ .	The valid Todo application page loads successfully.	Yes	<yes>
2	Change the address to an invalid route, such as https://buwebdev.github.io/todo/invalid-page .	The user is taken to an error page for the invalid URL.	Yes	<yes>
3	Review the content of the error page.	The page clearly indicates that the requested page cannot be found.	Yes	<yes>
4	Confirm the error page is styled for the Todo website rather than displaying only a generic browser error.	The invalid route displays a custom 404 error page or custom application error view.	Yes	<yes>

Test Case Template

5	Use the browser Back button or navigate back to https://buwebdev.github.io/todo/ .	The user can return to the Todo application homepage successfully.	Yes	<yes>
Comments	As expected.			

Test 5	Responsive Mobile and Tablet Views			
	Test Objective: Verifies that the Todo application provides usable views for mobile and tablet screen sizes.	Developer: Date tested: 2026/06/25	Peer tester: Date tested: <6/28/2026>	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Open https://buwebdev.github.io/todo/ in a desktop browser.	The Todo application loads successfully in the browser.	Yes	<yes>
2	Use browser developer tools or a responsive testing mode to view the page at a mobile width.	The Task Form, Add Task button, and Todo List remain visible and usable on a mobile-sized screen.	Yes	<yes>
3	Create a todo item while using the mobile-sized view.	The new todo item is added to the Todo List without layout issues.	Yes	<yes>
4	Switch the responsive testing mode to a tablet-sized screen.	The Task Form, Add Task button, and Todo List remain readable and properly arranged on a tablet-sized screen.	Yes	<yes>
5	Edit or delete a todo item while using the tablet-sized view.	The selected todo action works correctly and the layout remains usable.	Yes	<yes>
Comments	As expected			

I'm going to separate the screenshot into a different file because there is a bug in the template
Miguel
